Hedensted Spildevand A/S is a company that treats wastewater and operates 800 kilometre sewer, we also operates five wastewater treatment plants and about 300 pump stations for waste water also.

Almost exclusively technical traps currently carry our rat control

Before we in October 2008 started using technical traps for rat control in sewers and on our land at wastewater treatment plants and pumping stations, we used every year around 500 kg. poison.

Although we today are fighting rats in many more kilometre sewer than before October 2008 when we started using technical traps, we almost no longer use poison, from 2008 to 2015, we have annually spent between 1.5 kg. and 7.9 kg. poison.

The technical traps we use are mostly from the Danish company WiseCon.

We use three different types of traps, WiseTrap, WiseI and WiseBox

The number of technical traps we use today to fight rats is divided as follows.

400 pcs. WiseTrap, 45 pcs. WiseI and 125 pcs WiseBox

In the 7.5 years we have fought rats with traps, we have had good experiences with using them.

We have fought a larger area without spending more time than using poison to fight the rats.

Hedensted Spildevand A/S therefore believes that technical traps is a good alternative to poison by combating rats in both sewer and at open land.

Yours sincerely

Steen Hummelgaard

Operations Manager

At Hedensted Spildevand A/S
