

Manager of a company wich propose an « against termites treatment », I use the process « Senti Tech » (active matter : HEXAFLUMURON) since 2001.

This technic is only one wich enable the elimination of all species of termites founded here, in our tropical areas, this technic also allows a total protection of the buildings (constructions, houses) without causing any king of damage to them.

The HEXAFLUMURON is given to the termites at very small doses in closed stations, this process allows to eliminate radically this parasite from the houses (constructions) without a migradion of the molecule in the differents kings of grounds encountered here in the West Indies and Guyane (Sandy, Clayish or Chalky grounds).

The suppresion of the « HEXAFLUMURON » will cause an increasing utilization of pesticides in the grounds and the housings without solving, in a long terme, the termite problem.
