

# Competent Authority Report

## **ADDENDUM to Document IIIA, Section 4.2**

### **Study Summaries Active Substance**

**C<sub>8-18</sub>-TMAC**  
**(CAS no. 61789-18-2)**

**Product-type 8**  
**(Wood Preservatives)**

Rapporteur Member State: Italy

May 2014

This Addendum supplements Doc. IIIA Section 4.2 of the First Draft Competent Authority Report (CAR) which was prepared by the RMS (Italy) according to Directive 98/8/EC for the purpose of the review of the existing biocidal active substance **Quaternary ammonium compounds, coco alkyltrimethyl, chlorides** (C<sub>8-18</sub>-TMAC, CAS number 61789-18-2) as Wood Preservative (Product Type 8).

Analytical methods for the determination of C<sub>8-18</sub>-TMAC residues in soil and water (drinking-, ground- and surface-water), along with the relevant study summary, were submitted by Akzo Noble Surface Chemistry AB in May 2012 in order to fill the data gaps which had been remarked by the RMS following the evaluation of the original Dossier.

The RMS conclusions, resulting from the evaluation of the new documentation, are available under the relevant evaluation boxes. Note that, in order to facilitate readability, two separate evaluation boxes have been compiled by the RMS (one for residues in soil, one for water).

<b>Section A4.2a and 4.2c</b>	<b>Analytical Methods for Detection and Identification</b> <b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b> Ground water, surface water, tap water and soil	
	<b>1 REFERENCE</b>	<b>Official use only</b>
<b>1.1 Reference</b>	██████ (2012), TMAC (Iyophilised Arquad C-35) Residue Analytical Method for the Determination in Ground, Surface, Tap Water and Soil, DR.U.NOACK-LABORATORIEN, CRA14111 / 101025AH	
<b>1.2 Data protection</b>	Yes	
1.2.1 Data owner	AkzoNobel Surface Chemistry AB.	
1.2.2		
1.2.3 Criteria for data protection	Data submitted to the MS after 13 May 2000 on existing [a.s. / b.p.] for the purpose of its [entry into Annex I/IA / authorisation]	
	<b>2 GUIDELINES AND QUALITY ASSURANCE</b>	
<b>2.1 Guideline study</b>	Yes, SANCO/825/00 rev. 7 (17/03/04)	X
<b>2.2 GLP</b>	Yes	
<b>2.3 Deviations</b>	Yes; the expiry date of the Surface Water was prolonged after sensoric and analytical verification until 2 months and the test item name was changed according to the study "Content of the Active Ingredients and Relevant Impurities " as specified under Literature.	
	<b>3 MATERIALS AND METHODS</b>	
<b>3.1 Preliminary treatment</b>		
3.1.1 Sample preparation	<p>Spiking solutions of the test item</p> <p>I (100 µg/L) = Mixed standard spiking solution diluted by total factor 10000 from the stock solution with acetonitrile</p> <p>II (1000 µg/L) = Mixed standard spiking solution diluted by total factor 1000 from the stock solution with acetonitrile</p> <p>III (2500 µg/L) = Mixed standard spiking solution diluted by total factor 400 from the stock solution with acetonitrile: HPLC water (60:40) + 1 % formic acid</p> <p>IV (25000 µg/L) = Mixed standard spiking solution diluted by total factor 40 from the stock solution with acetonitrile: HPLC water (60:40) + 1 % formic acid</p> <p>Spiking solutions of the standards</p> <p>V (10 µg/L) = Mixed standard spiking solution diluted by total factor 100000 from active ingredient stock solutions with acetonitrile</p> <p>VI (100 µg/L) = Mixed standard spiking solution diluted by total factor 10000 from active ingredient stock solutions with acetonitrile</p>	X*

<p><b>Section A4.2a and 4.2c</b></p>	<p><b>Analytical Methods for Detection and Identification</b>  <b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b>  Ground water, surface water, tap water and soil</p>	
	<p>VII (250 µg/L) = Mixed standard spiking solution diluted by total factor 4000 from active ingredient stock solutions with acetonitrile</p> <p>VIII (2500 µg/L) = Mixed standard spiking solution diluted by total factor 400 from active ingredient stock solutions with acetonitrile</p> <p>IX (1000 µg/L) = Mixed standard spiking solution diluted by total factor 1000 from active ingredient stock solutions with acetonitrile</p> <p>Ground Water, Surface Water and Tap Water</p> <p>1 x LOQ (0.1 µg/L) for the test item  5 samples of 180 mL corresponding water were spiked with 180 µL of the spiking solution I in a 200 mL measuring flask and filled up to 200 mL with methanol. Samples were given over Strata-X cartridges (conditioned with 10 mL acetonitrile + 0.1% TFA, after that 10 mL acetonitrile + HPLC water (10:90)). The cartridges were washed with 5 mL methanol : HPLC water (10:90). After drying, the cartridges were eluted with 10 mL acetonitrile + 0.1 % TFA and evaporated to dryness at 40 °C on the rotary evaporator. The residue was taken up in 1 mL acetonitrile : HPLC water + 1% HCOOH (60:40) under 30 seconds sonification.</p> <p>10 x LOQ (1.0 µg/L) for the test item  5 samples of 180 mL corresponding water were spiked with 180 µL of the spiking solution II in a 200 mL measuring flask and filled up to 200 mL with methanol. Further steps according to 1x LOQ.</p> <p>1 x LOQ (0.014 µg/L) for the active ingredients  5 samples of 180 mL corresponding water were spiked with 252 µL of the spiking solution V in a 200 mL measuring flask and filled up to 200 mL with methanol. Further steps according to 1x LOQ of the test item.</p> <p>10 x LOQ (0.14 µg/L) for the active ingredients  5 samples of 180 mL corresponding water were spiked with 252 µL of the spiking solution VI in a 200 mL measuring flask and filled up to 200 mL with methanol. Further steps according to 1x LOQ of the test item.</p> <p>Control  2 samples of 180 mL corresponding water were prepared each for the test item and compounds as described for the 1 x LOQ.</p> <p>Matrix effect  Matrix Control for TMAC (lyophilised Arquad C-35):  50 µL of the spiking solution I were added to 0.45 mL of one control sample</p>	<p>X**</p>

<p><b>Section A4.2a and 4.2c</b></p>	<p><b>Analytical Methods for Detection and Identification</b>  <b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b>  Ground water, surface water, tap water and soil</p>	
	<p>after sample preparation.</p> <p>Matrix Control for C8-, C10-, C12-, C14-, C16-, C18- and C18-unsaturated trimethylammonium chloride:  50 µL of the spiking solution VI were added to 0.45 mL of one control sample after sample preparation.</p> <p>Soil</p> <p>1 x LOQ (0.05 mg/kg) for the test item  5 samples of 5 g soil were weighed into 50 mL centrifuge tubes, 0.505 mL HPLC water, spiked with 100 µL of the spiking solution III and then homogenized. 10 mL acetonitrile + 1 % TFA were added and treated for 10 minutes on the rotary shaker at 80 rounds per minute, then sonificated at room temperature for 5 minutes. After the extraction, the samples get centrifuged for 5 minutes on 3000 rounds per minute and then the supernatant was transferred to a new 50 mL centrifuge tube. This extraction was repeated twice, but the second and third extraction contained 5 mL acetonitrile + 1 % TFA instead of 10 mL. All 3 supernatants were united in the corresponding centrifuge tube filled up to 20 mL with acetonitrile and centrifuged again under same conditions.</p> <p>10 x LOQ (0.5 mg/kg) for the test item  5 samples of 5 g soil were weighed into 50 mL centrifuge tubes, 0.505 mL HPLC water, spiked with 100 µL of the spiking solution IV and then homogenized. Further steps according to 1x LOQ.</p> <p>1 x LOQ (0.00714 mg/kg) for the active ingredients  5 samples of 5 g soil were weighed into 50 mL centrifuge tubes, humidified with 0.505 mL HPLC water, spiked with 142.8 µL of the spiking solution VII and then homgenized. Further steps according to 1x LOQ of the test item.</p> <p>10 x LOQ (0.0714 mg/kg) for the active ingredients  5 samples of 5 g soil were weighed into 50 mL centrifuge tubes, humidified with 0.505 mL HPLC water, spiked with 142.8 µL of the spiking solution VIII and then homgenized. Further steps according to 1x LOQ of the test item.</p> <p>Control  2 samples of 5 g soil were prepared without spiking as deccribed for the 1 x LOQ.</p>	

<b>Section A4.2a and 4.2c</b>	<b>Analytical Methods for Detection and Identification</b> <b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b> Ground water, surface water, tap water and soil																																										
	Matrix effect Matrix Control for TMAC (lyophilised Arquad C-35): 10 µL of the spiking solution III were added to 0.99 mL of one control sample after sample preparation.  Matrix Control for C8-, C10-, C12-, C14-, C16-, C18- and C18-unsaturated trimethylammonium chloride: 10 µL of the spiking solution IX were added to 0.99 mL of one control sample after sample preparation. 3.2.3 Standard(s)	Octyltrimethylammonium chloride (Lab. ID 14362) Decyltrimethylammonium chloride (Lab. ID 14363) Dodecyltrimethylammonium chloride (Lab. ID 14364) Tetradecyltrimethylammonium chloride (Lab. ID 14365) Hexadecyltrimethylammonium chloride (Lab. ID 14366) Stearyltrimethylammonium chloride (Lab. ID 14367) Arquad O-50 (C18 unsaturated) (Lab. ID 14368)																																				
3.2.4 Interfering substance(s)	None																																				
<b>3.3 Linearity</b>																																					
3.3.1 Calibration range	1 – 100 µg/L for C8-, C10-, C12-, C14-, C16-, C18- and C18-unsaturated trimethylammonium chloride	X1																																			
3.3.2 Number of measurements	6 concentrations	X1																																			
3.3.3 Linearity	The analytical system gave a linear response in the nominal range of 1 – 100 µg/L for C8-, C10-, C12-, C14-, C16-, C18- and C18-unsaturated trimethylammonium chloride. The linearity R <sup>2</sup> was determined to be > 0.992.	X1																																			

Section A4.2a and 4.2c	<b>Analytical Methods for Detection and Identification</b> <b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b> Ground water, surface water, tap water and soil					
3.4 Specificity: interfering substances	Specificity is given by the mass spectrometric method, due to the formation of specific precursor and product ions of the test item for both quantification and confirmation methods. The mean responses of the blank values of the corresponding two control samples were lower than 30 % of LOQ for each test system. Except for tap water, there was a slightly higher amount of C16-TMAC which was subtracted from the mean measured concentrations.					X2
3.5 Recovery rates at different levels	Recovery rates of TMAC (lyophilised Arquad C-35)

Section A4.2a and 4.2c	<p><b>Analytical Methods for Detection and Identification</b></p> <p><b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b></p> <p>Ground water, surface water, tap water and soil</p>	
	<p><b>4 APPLICANT'S SUMMARY AND CONCLUSION</b></p>	
4.1 Materials and methods	See Part 3	
4.2 Conclusion	<p>For the external standard the analytical system gave a linear response for C<sub>8</sub>-, C<sub>10</sub>-, C<sub>12</sub>-, C<sub>14</sub>-, C<sub>16</sub>-, C<sub>18</sub>- and C<sub>18</sub>-unsaturated trimethylammonium chloride, between nominal 1 and 100 µg/L.</p> <p><b>Ground Water</b></p> <p>The results confirm that the described method is suitable for the determination of residues of TMAC (lyophilised Arquad C-35) in <b>ground water</b> at limit of quantification 0.1 µg/L. Due to the composition of the test item the C<sub>8</sub>-, C<sub>10</sub>-, C<sub>16</sub>-, C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC components were below the limit of quantification of the analytical system. The other active ingredients gave acceptable recovery and precision for both, quantifier and confirmation trace. For results see 6.4.1. In order to characterise the limit of quantification, even for C<sub>8</sub>-, C<sub>10</sub>-, C<sub>16</sub>-, C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC, an additional set of recovery determinations from <b>ground water</b> was performed at limit of quantification of 0.014 µg/L for each active ingredient, respectively. Acceptable recovery and precision for both, quantifier and confirmation trace were obtained, confirming the ability of the method to quantify the active ingredients down to the given limit.</p> <p><b>Surface Water</b></p> <p>The results confirm that the described method is suitable for the determination of residues of TMAC (lyophilised Arquad C-35) in <b>surface water</b> at limit of quantification 0.1 µg/L. Due to the composition of the test item the C<sub>8</sub>-, C<sub>10</sub>-, C<sub>16</sub>-, C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC components were below the limit of quantification of the analytical system. The other active ingredients gave acceptable recovery and precision for both, quantifier and confirmation trace. For results see 6.4.1. In order to characterise the limit of quantification, even for C<sub>8</sub>-, C<sub>10</sub>-, C<sub>16</sub>-, C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC, an additional set of recovery determinations from <b>surface water</b> was performed at limit of quantification of 0.014 µg/L for each active ingredient, respectively. Acceptable recovery and precision for both, quantifier and confirmation trace were obtained, confirming the ability of the method to quantify the active ingredients down to the given limit.</p> <p><b>Tap Water</b></p> <p>The results confirm that the described method is suitable for the determination of residues of TMAC (lyophilised Arquad C-35) in <b>tap</b></p>	

Section A4.2a and 4.2c	<p><b>Analytical Methods for Detection and Identification</b></p> <p><b>Analytical methods including recovery rates and the limits of determination for the active substance, and for residues thereof, and where relevant in/on the following:</b></p> <p>Ground water, surface water, tap water and soil</p>	
	<p><b>water</b> at limit of quantification 0.1 µg/L. Due to the composition of the test item the C<sub>8</sub>-,C<sub>10</sub>-, C<sub>16</sub>-,C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC components were below the limit of quantification of the analytical system. The other active ingredients gave acceptable recovery and precision for both, quantifier and confirmation trace. For results see 6.4.1. In order to characterise the limit of quantification, even for C<sub>8</sub>-,C<sub>10</sub>-, C<sub>16</sub>-,C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC, an additional set of recovery determinations from <b>tap water</b> was performed at limit of quantification of 0.014 µg/L for each active ingredient, respectively. Acceptable recovery and precision for both, quantifier and confirmation trace were obtained, confirming the ability of the method to quantify the active ingredients down to the given limit.</p> <p><b>Soil</b></p> <p>The results confirm that the described method is suitable for the determination of residues of TMAC (lyophilised Arquad C-35) in soil at limit of quantification 0.05 mg/kg. Due to the composition of the test item the C<sub>8</sub>-,C<sub>10</sub>-, C<sub>16</sub>-,C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC components were below the limit of quantification of the analytical system. The other active ingredients gave acceptable recovery and precision for both, quantifier and confirmation trace. For results see 6.4.1. In order to characterise the limit of quantification, even for C<sub>8</sub>-,C<sub>10</sub>-, C<sub>16</sub>-,C<sub>18</sub>- and C<sub>18</sub>-unsaturated TMAC, an additional set of recovery determinations from soil was performed at limit of quantification of 0.00714 mg/kg for each active ingredient, respectively. Acceptable recovery and precision for both, quantifier and confirmation trace were obtained, confirming the ability of the method to quantify the active ingredients down to the given limit.</p>

EVALUATION BY RAPPORTEUR MEMBER STATE																													
Date	May 2014																												
Materials and methods	<p><b>4.2a Soil</b></p> <p>An analytical method for the determination of C<sub>8-18</sub>-TMAC residues in soil by LC-MS/MS is available. Analysis was performed in gradient mode on a C18 reversed-phase column, using external standards. Detection was carried out by an electrospray tandem mass spectrometer in positive mode. For each constituent of C<sub>8-18</sub>-TMAC, specificity was achieved by formation of a specific precursor ion and two specific product ions (one mass transition used for quantification, the other for identity confirmation).</p> <table border="1"> <thead> <tr> <th>C<sub>8-18</sub>-TMAC</th> <th>Mass transitions</th> </tr> </thead> <tbody> <tr> <td rowspan="2">C<sub>8</sub>-TMAC</td> <td>172.24→60.17 (quantification)</td> </tr> <tr> <td>172.24→57.18 (confirmation)</td> </tr> <tr> <td rowspan="2">C<sub>10</sub>-TMAC</td> <td>200.27→60.17 (quantification)</td> </tr> <tr> <td>200.27→57.18 (confirmation)</td> </tr> <tr> <td rowspan="2">C<sub>12</sub>-TMAC</td> <td>228.30→60.17 (quantification)</td> </tr> <tr> <td>228.30→57.18 (confirmation)</td> </tr> <tr> <td rowspan="2">C<sub>14</sub>-TMAC</td> <td>256.33→60.17 (quantification)</td> </tr> <tr> <td>256.33→57.18 (confirmation)</td> </tr> <tr> <td rowspan="2">C<sub>16</sub>-TMAC</td> <td>284.43→60.17 (quantification)</td> </tr> <tr> <td>284.43→57.18 (confirmation)</td> </tr> <tr> <td rowspan="2">C<sub>18</sub>-TMAC</td> <td>312.46→60.17 (quantification)</td> </tr> <tr> <td>312.46→57.18 (confirmation)</td> </tr> </tbody> </table> <p>The following information was available in the original study report as regards the investigated soil (certified <i>LUF</i>A soil No. 2.2, batch Sp2.23311):</p> <table border="1"> <tbody> <tr> <td>Type</td> <td>Loamy sand (IS, according to German DIN classification)</td> </tr> <tr> <td>Origin</td> <td>LUFA, Obere Langgasse 40 67346 Speyer "Großer Striet" No 585 D-67374 Hanghofer</td> </tr> <tr> <td>pH</td> <td>5.5</td> </tr> <tr> <td>Carbon content [%]</td> <td>1.87</td> </tr> </tbody> </table> <p>The method was validated at 0.05 mg C<sub>8-18</sub>-TMAC/kg and 0.50 mg C<sub>8-18</sub>-TMAC /kg. Conclusion	<p>The LC-MS/MS method submitted in May 2012 for the analysis of C<sub>8-18</sub>-TMAC residues down to a level of 0.05 mg C<sub>8-18</sub>-TMAC/kg in soil meets the requirements provided for by SANCO/825/00 and the Additional Guidance to TNSG on Data Requirements on analytical methods. The method supports the residue definition. The method is highly specific (LC-MS/MS, with two mass transitions validated), linear over the range 0.008-0.75 mg C<sub>8-18</sub>-TMAC/kg in soil, accurate (with recovery rates at LOQ and 10xLOQ in the acceptable range 70–120%) and precise (%RSD<sub>n=5</sub> &lt; 20% for either fortification level). The LOQ (as the lowest validated fortification level) complies with the relevant end-point (&lt; EC<sub>50</sub> = 11 mg/kg dw soil; read-across from DDAC data).</p> <p>Satisfactory results in terms of recovery rates and %RSD<sub>n=5</sub> were also obtained for individual constituents of C<sub>8-18</sub>-TMAC (C<sub>8</sub>-TMAC, C<sub>10</sub>-TMAC C<sub>12</sub>-TMAC, C<sub>14</sub>-TMAC, C<sub>16</sub>-TMAC and C<sub>18</sub>-TMAC) at 0.00714 mg/kg and 0.0714 mg/kg each.</p>																												
Reliability	2																												

<b>Acceptability</b>	Acceptable																																														
<b>Remarks</b>	<p>X – Minor deviations from SANCO/825/00 rev. 7 have occurred (see general remark below). Also note that rev. 8.1 (16/11/2010) is now available for the Guideline.</p> <p>X1 – 7 concentration levels (with single determination) were considered (calibration in solvents). The linearity range of 1–100 µg/L for each constituent of C<sub>8-18</sub>-TMAC corresponds to 0.008–0.75 mg C<sub>8-18</sub>-TMAC/kg in soil (inferred by the RMS according to the information on sample preparation available in the study report and taking into account that the % of C12-TMAC in the C<sub>8-18</sub>-TMAC technical material used for spiking is 53.5%).</p> <p>Linearity curves:</p> <table border="1"> <thead> <tr> <th>C<sub>8-18</sub>-TMAC</th> <th>Mass transition</th> <th>Curve equation</th> <th>r<sup>2</sup></th> </tr> </thead> <tbody> <tr> <td rowspan="2">C<sub>8</sub>-TMAC</td> <td>172.24→60.17 (quantification)</td> <td>y = 1939.74x</td> <td>0.999919</td> </tr> <tr> <td>172.24→57.18 (confirmation)</td> <td>y = 647.446x</td> <td>0.999884</td> </tr> <tr> <td rowspan="2">C<sub>10</sub>-TMAC</td> <td>200.27→60.17 (quantification)</td> <td>y = 1953.15x</td> <td>0.999961</td> </tr> <tr> <td>200.27→57.18 (confirmation)</td> <td>y = 690.483x</td> <td>0.999882</td> </tr> <tr> <td rowspan="2">C<sub>12</sub>-TMAC</td> <td>228.30→60.17 (quantification)</td> <td>y = 1835.66x</td> <td>0.999945</td> </tr> <tr> <td>228.30→57.18 (confirmation)</td> <td>y = 629.737x</td> <td>0.999758</td> </tr> <tr> <td rowspan="2">C<sub>14</sub>-TMAC</td> <td>256.33→60.17 (quantification)</td> <td>y = 1597.1x</td> <td>0.999744</td> </tr> <tr> <td>256.33→57.18 (confirmation)</td> <td>y = 509.379x</td> <td>0.999456</td> </tr> <tr> <td rowspan="2">C<sub>16</sub>-TMAC</td> <td>284.43→60.17 (quantification)</td> <td>y = 1543.68x</td> <td>0.999779</td> </tr> <tr> <td>284.43→57.18 (confirmation)</td> <td>y = 477.949x</td> <td>0.999838</td> </tr> <tr> <td rowspan="2">C<sub>18</sub>-TMAC</td> <td>312.46→60.17 (quantification)</td> <td>y = 1296.88x</td> <td>0.999556</td> </tr> <tr> <td>312.46→57.18 (confirmation)</td> <td>y = 370.575x</td> <td>0.999068</td> </tr> </tbody> </table> <p>X2 – Since two mass transitions have been investigated, the submitted LC-MS/MS can be concluded to be highly specific.</p> <p>X* – Spiking solutions I to IV of the test item (lyophilized Arquad C-35) are erroneously reported (also in the original study report) to be “mixed standard spiking solutions diluted by a total factor of ... from the stock solution” instead of “dilution by total factor of ... from the stock solution of TMAC”.</p> <p>X** – To investigate matrix effects, the response of C<sub>8-18</sub>-TMAC in matrix as well as the response of individual standards in matrix were also considered. According to the original study report, solutions were prepared by fortification of a control sample with lyophilized Arquad C-35 or with the relevant standards, respectively. Satisfactory recovery rates were obtained.</p> <p>General remarks:</p> <ul style="list-style-type: none"> <li>– No spectrum of the product ions has been provided in the original study report. The selection of the ions used for quantification/confirmation has not been justified, either.</li> <li>– <b>eCA-IT considers C18-unsaturated as not part of the residue definition. Though available in the original study report, validation data relevant to C18-unsaturated have not been taken into account by RMS-IT (ISSUE TO BE DISCUSSED AT WG LEVEL).</b></li> </ul>	C <sub>8-18</sub> -TMAC	Mass transition	Curve equation	r <sup>2</sup>	C <sub>8</sub> -TMAC	172.24→60.17 (quantification)	y = 1939.74x	0.999919	172.24→57.18 (confirmation)	y = 647.446x	0.999884	C <sub>10</sub> -TMAC	200.27→60.17 (quantification)	y = 1953.15x	0.999961	200.27→57.18 (confirmation)	y = 690.483x	0.999882	C <sub>12</sub> -TMAC	228.30→60.17 (quantification)	y = 1835.66x	0.999945	228.30→57.18 (confirmation)	y = 629.737x	0.999758	C <sub>14</sub> -TMAC	256.33→60.17 (quantification)	y = 1597.1x	0.999744	256.33→57.18 (confirmation)	y = 509.379x	0.999456	C <sub>16</sub> -TMAC	284.43→60.17 (quantification)	y = 1543.68x	0.999779	284.43→57.18 (confirmation)	y = 477.949x	0.999838	C <sub>18</sub> -TMAC	312.46→60.17 (quantification)	y = 1296.88x	0.999556	312.46→57.18 (confirmation)	y = 370.575x	0.999068

C <sub>18</sub> -TMAC	312.46→60.17 (quantification)	y = 1296.88x	0.999556	
	312.46→57.18 (confirmation)	y = 370.575x	0.999068	
	<p>X2 – Since two mass transitions have been investigated, the submitted LC-MS/MS can be concluded to be highly specific.</p> <p>X* – Spiking solutions I to IV of the test item (lyophilized Arquad C-35) are erroneously reported (also in the original study report) to be “mixed standard spiking solutions diluted by a total factor of ... from the stock solution” instead of “dilution by total factor of ... from the stock solution of TMAC”.</p> <p>X** – To investigate matrix effects, the response of C<sub>8-18</sub>-TMAC in matrix as well as the response of individual standards in matrix were also considered. According to the original study report, solutions were prepared by fortification of a control sample with lyophilized Arquad C-35 or with the relevant standards, respectively. Satisfactory recovery rates were obtained.</p> <p>General remarks:</p> <ul style="list-style-type: none"> <li>– no spectrum of the product ions has been provided in the original study report. The selection of the ions used for quantification/confirmation has not been justified, either.</li> <li>– <b>eCA-IT considers C18-unsaturated as not part of the residue definition. Though available in the original study report, validation data relevant to C18-unsaturated have not been taken into account by RMS-IT (ISSUE TO BE DISCUSSED AT WG LEVEL).</b></li> </ul>
