

**5 September 2018**

## Draft background document for 2-ethoxyethanol

### Document developed in the context of ECHA's ninth recommendation for the inclusion of substances in Annex XIV

*ECHA is required to regularly prioritise the substances from the Candidate List and to submit to the European Commission recommendations of substances that should be subject to authorisation. This document provides background information on the prioritisation of the substance, as well as on the determination of its draft entry in the Authorisation List (Annex XIV of the REACH Regulation). Information comprising confidential comments submitted during public consultation, or relating to content of registration dossiers which is of such nature that it may potentially harm the commercial interest of companies if it was disclosed, is provided in a confidential annex to this document.*

**Information relevant for prioritisation and/or for proposing Annex XIV entries provided during the public consultation on the inclusion of 2-ethoxyethanol on the Authorisation List or in the registration dossiers (as of the last day of the public consultation, i.e. 5 December 2018) will be taken into consideration when finalising the recommendation and will be reflected in the final background document.**

## 1. Identity of the substance

Identity of the substance as provided in the Candidate List<sup>1</sup>:

Name: 2-ethoxyethanol  
EC Number: 203-804-1  
CAS Number: 110-80-5

## 2. Background information for prioritisation

*Priority was assessed by using the General approach for prioritisation of SVHCs for inclusion in the list of substances subject to authorisation<sup>2</sup>. Results of the prioritisation of all substances included in the Candidate List by January 2018 and not yet included or recommended in Annex XIV of the REACH Regulation is available at [https://echa.europa.eu/documents/10162/13640/prioritisation\\_results\\_cl\\_substances\\_sept\\_2018\\_en.pdf](https://echa.europa.eu/documents/10162/13640/prioritisation_results_cl_substances_sept_2018_en.pdf).*

### 2.1. Intrinsic properties

2-ethoxyethanol was identified as a Substance of Very High Concern (SVHC) according to Article 57 (c) as it is classified in Annex VI, part 3, Table 3.1 (the list of harmonised classification and labelling of hazardous substances) of Regulation (EC) No 1272/2008 as Toxic for Reproduction, Category 1B, H360FD ("May damage fertility. May damage the unborn child") and was therefore included in the Candidate List for authorisation on 15 December 2010, following ECHA's decision ED/95/2010.

### 2.2. Volume used in the scope of authorisation

The amount of 2-ethoxyethanol manufactured and/or imported into the EU is according to registration data in the range 100 - 1,000 t/y (ECHA, 2018). Most of the tonnage seems to be used as intermediate. The use as intermediate and the use as laboratory chemical in scientific research and development appear to be outside the scope of authorisation. Taking into account the volume corresponding to the above uses as reflected in registrations and the Annex XV SVHC report (2010), the volume in the scope of authorisation is estimated to be in the range of 10 - 1,000 t/y.

More detailed information on the main uses and the relative share of the total tonnage is provided in Annex I.

### 2.3. Wide-dispersiveness of uses

Registered uses of 2-ethoxyethanol in the scope of authorisation include uses at industrial sites (e.g. formulation of mixtures, use as a solvent in manufacture of chemicals).

Furthermore, according to registration information the substance is used by professional workers (use as solvent) in volumes <10t/y.

More detailed information on uses is provided in Annex I.

<sup>1</sup> For further information please refer to the Candidate List and the respective support document at <https://www.echa.europa.eu/candidate-list-table>.

<sup>2</sup> Document can be accessed at [http://echa.europa.eu/documents/10162/13640/gen\\_approach\\_svhc\\_prior\\_in\\_recommendations\\_en.pdf](http://echa.europa.eu/documents/10162/13640/gen_approach_svhc_prior_in_recommendations_en.pdf)

## 2.4. Further considerations for priority setting

2-ethoxyethanol is considered together with 2-methoxyethanol as a group, as based on structural similarities and similar uses reported in registrations it appears that 2-ethoxyethanol could replace 2-methoxyethanol in (some of) its uses.

## 2.5. Conclusion

| Verbal descriptions and scores  |   |   | Total score<br>(= IP + V + WDU) | Further considerations         |
|---|---|---|---------------------------------|--------------------------------|
| Inherent properties (IP)  | Volume (V)  | Wide dispersiveness of uses (WDU)   |                                 |                                |
| 2-ethoxyethanol is classified as toxic for reproduction 1B meeting the criteria of Article 57 (c)<br><br>Score: 1 | The amount of 2-ethoxyethanol used in the scope of authorisation is in the range of 10 - 1,000 t/y.<br><br>Score: 6-9 | 2-ethoxyethanol is used at industrial sites.<br><br>Initial score: 5<br><br>Furthermore, the substance is also used by professional workers in volumes <10 t/y.<br><br>Refined score: 7 | 14-17                           | Grouping with 2-methoxyethanol |

### Conclusion

On the basis of the prioritisation criteria further strengthened by grouping considerations, 2-ethoxyethanol receives priority among the substances in the Candidate List (see link to the prioritisation results above). Therefore, it is proposed to prioritise 2-ethoxyethanol for inclusion in Annex XIV.

## 3. Background information for the proposed Annex XIV entry

### 3.1. Latest application and sunset dates

ECHA proposes the following transitional arrangements:

Latest application date (LAD):      Date of inclusion in Annex XIV plus **18, 21 or 24 months**

Sunset date:                              18 months after LAD

ECHA will make the final LAD allocation only when finalising the recommendation and will use all available relevant information including that received in the public consultation. ECHA will apply

the Annex XIV entries approach<sup>3</sup> and the criteria described in the implementation document<sup>4</sup>. According to these documents, substances for which the available information indicates a relatively high number of uses and/or complex supply chain(s) are allocated to the "later" LAD slots.

A summary of the information currently available is provided in Annex I.

The time needed to prepare an authorisation application of sufficient quality has been estimated to require 18 months in standard cases. When setting the LADs ECHA has also to take into account the anticipated workload of ECHA's Committees and Secretariat to process authorisation applications. This is done by allocating the substances proposed to be included in the final recommendation in slots, normally 3, and setting the application dates with 3 months intervals in between these slots (standard LAD slots: 18, 21 and 24 months).

For substances to be included in the 9<sup>th</sup> recommendation, ECHA sees currently no reason to deviate from these standard LAD slots.

ECHA will allocate to the same slot substances considered as a group (see Section 2.4), i.e. 2-ethoxyethanol will be allocated to the same slot as 2-methoxyethanol.

## 3.2. Review period for certain uses

ECHA proposes not to include in Annex XIV any review period for 2-ethoxyethanol.

In general, ECHA does not propose any upfront specific review periods in its draft recommendations for inclusion in the Authorisation List. Setting review periods in Annex XIV for any uses would require that ECHA had access to adequate information on different aspects relevant for a decision on the review period. Such information is generally not available to ECHA at the recommendation step. It is to be stressed that, in the next step of the authorisation process, i.e. during the decision on whether authorisation is granted based on specific applications by manufacturers, importers or downstream users of the substance, all authorisation decisions will include specific review periods which will be based on concrete case-specific information provided in the applications for authorisation.

## 3.3. Uses or categories of uses exempted from authorisation requirement

### 3.3.1 Exemption under Article 58(2)

ECHA proposes not to recommend exemptions for uses of 2-ethoxyethanol on the basis of Article 58 (1)(e) in combination with Article 58(2) of the REACH Regulation.

According to Article 58(2) of REACH it is possible to exempt from the authorisation requirement uses or categories of uses *'provided that, on the basis of the existing specific Community legislation imposing minimum requirements relating to the protection of human health or the environment for the use of the substance, the risk is properly controlled'*.

---

<sup>3</sup> General approach can be accessed at [http://echa.europa.eu/documents/10162/13640/recom\\_general\\_approach\\_draft\\_axiv\\_entries.pdf](http://echa.europa.eu/documents/10162/13640/recom_general_approach_draft_axiv_entries.pdf)

<sup>4</sup> Practical implementation document can be accessed at [https://www.echa.europa.eu/documents/10162/13640/recom\\_general\\_approach\\_draft\\_axiv\\_entries\\_draft\\_implementation\\_en.pdf](https://www.echa.europa.eu/documents/10162/13640/recom_general_approach_draft_axiv_entries_draft_implementation_en.pdf)

ECHA considers the following elements in deciding whether to recommend an exemption of a use of a substance:

- There is existing EU legislation (i.e., rules of law adopted by a European Union entity intended to produce binding effects) addressing the specific use (or categories of use) that is proposed to be exempted;
- The existing EU legislation properly controls the risks to human health and/or the environment from the use of the substance arising from the intrinsic properties of the substance that are specified in Annex XIV; generally, the legislation in question should specifically refer to the substance to be included in Annex XIV either by naming the substance or by referring to a group of substances that is clearly distinct from other substances;
- The existing EU legislation imposes minimum requirements for the control of risks of the use. The piece of legislation (i) has to define the minimum standard to be adopted in the interest of public health or the environment and (ii) allows EU Member States to impose more stringent requirements than the specific minimum requirements set out in the EU legislation in question. Legislation setting only a general framework of requirements or the aim of imposing measures or not clearly specifying the actual type and effectiveness of measures to be implemented is not regarded as sufficient to meet the requirements under Article 58(2). Furthermore, it can be implied from the REACH Regulation that attention should be paid as to whether and how the risks related to the life-cycle stages resulting from the uses in question (i.e. service-life of articles and waste stage(s), as relevant) are covered by the legislation.

*Where interested parties are considering making a request for exemption from authorisation under Art. 58(2) for a particular use, it is strongly recommended that they take into account ECHA's previous responses to Art. 58(2) exemption requests<sup>5</sup>. It is noted that any Art. 58(2) request is assessed case-by-case.*

*Furthermore, it should be noted that if a use falls under the generic exemptions from authorisation<sup>6</sup>, there is no need to propose an additional specific exemption.*

### **3.3.2 Exemption of product and process oriented research and development (PPORD)**

ECHA proposes not to recommend to include in Annex XIV any exemption from authorisation for the use of 2-ethoxyethanol for PPORD.

So far, ECHA has not considered it appropriate to recommend specific exemptions for PPORD for any substance. ECHA notes that an operator may use a substance included in Annex XIV for a PPORD activity if that operator has obtained authorisation for that use of the substance in accordance with Articles 60 to 64 of the REACH Regulation.

No PPORD notifications have been submitted for 2-ethoxyethanol<sup>7</sup>.

<sup>5</sup> See analysis of most relevant pieces of legislation e.g. in sections C.2.8 – C.2.12 in <https://echa.europa.eu/documents/10162/b80fccc0-c055-7cd7-4743-8d3c26956b15>, or section C.2 in <https://echa.europa.eu/documents/10162/b1820209-b7f4-4f87-998a-a996729c7375>

<sup>6</sup> Generic exemptions from the authorisation requirement: [https://echa.europa.eu/documents/10162/13640/generic\\_exemptions\\_authorisation\\_en.pdf/9291ab2a-fe2f-418d-9ce7-4c5abaaa04fc](https://echa.europa.eu/documents/10162/13640/generic_exemptions_authorisation_en.pdf/9291ab2a-fe2f-418d-9ce7-4c5abaaa04fc)

<sup>7</sup> As of 1 February 2018.

## Annex I: Further information on uses

### 1. Main (sector of) uses and relative share of the total tonnage

The share of 2-ethoxyethanol used as solvent was estimated in the EU RAR (2008) to be about 20 % of the production volume in the EU, while the remaining 80 % was for uses as intermediate. The share of the use as solvent, which is within the scope of authorisation, seems to have decreased based on the registration information.

### 2. Further details on the type of applications, functions and market trend per use

Information submitted in the SVHC public consultation indicated a higher number of uses for 2-ethoxyethanol than currently reported in registrations under REACH, e.g. in paints, surface protection, printing, dyeing, hydraulic fluids (RCOM, 2010). The number of uses has been reduced considerably in the last years. Substitution seems to have happened in many sectors, and alternatives for both 2-ethoxyethanol and 2-methoxyethanol, which are structurally very similar solvents, seem to be available (Annex XV SVHC report, 2010).

2-ethoxyethanol is considered a volatile organic compound and has therefore certain limitations for the use as solvent, e.g. in certain paints (Annex XV SVHC report, 2010). Even though it seems that in 2008 when the European Risk assessment report was published no information on remaining wide dispersive use of 2-ethoxyethanol outside the chemical industry was available (EU RAR, 2008), professional uses other than as laboratory chemical, i.e. as solvent in the manufacture of fine chemicals, are reported in registrations (ECHA, 2018).

### 3. Structure and complexity of supply chains

The following assumptions are made based on currently available information and will be used, together with any relevant information from public consultation, to allocate the substance group to a specific LAD slot in the final recommendation.

2-ethoxyethanol is manufactured and/or imported by a limited number of registrants. No precise and up-to-date information is available on the number of industrial sites where the substances is currently used.

The supply chain can be characterised<sup>8</sup> by the following actors: formulators, users at industrial sites and professional workers (relevant life cycle stages: F, IS, PW).

2-ethoxyethanol as such or in formulations is used as a solvent (relevant product categories: PC0: Solvent).

The following sectors seems to rely on the substance for some of their uses in the scope of authorisation: manufacturers of fine chemicals and bulk chemicals (relevant sector of uses: SU9, SU8).

Some of the categories mentioned are not explicitly listed as use descriptors in registrations but could be derived from information on uses available in registration dossiers and the Annex XV SVHC report (2010).

---

<sup>8</sup> Categories listed here after (life cycle stage, SU, PC and AC) make reference to the use descriptor system described in ECHA's guidance on use description:

[https://echa.europa.eu/documents/10162/13632/information\\_requirements\\_r12\\_en.pdf](https://echa.europa.eu/documents/10162/13632/information_requirements_r12_en.pdf)
