	5	APPLICANT'S SUMMARY AND CONCLUSION	
5.1	Materials and methods		
5.2	Results and discussion	<p>Cyanide ion is toxic to microorganisms at concentrations as low as 5–10 mg/L (1, 2), acclimation increases tolerance to this compound (3). A number of pure cultures of microorganisms degrade low concentrations of cyanide under both aerobic and anaerobic conditions (4, 5, and 6).</p> <p>Mixed microorganisms in sewage sludge or activated sludge acclimated to cyanide also significantly biodegrade concentrations up to 100 mg/L of most simple and complex cyanides (7, 8, 9, and 10).</p> <p>A number of microorganisms have been identified that are capable of uptake, conversion, sorption, and/or precipitation of the cyanide ion, cyanate, and thiocyanate, including species of the genera, <i>Actinomyces</i>, <i>Alcaligenes</i>, <i>Arthrobacter</i>, <i>Bacillus</i>, <i>Micrococcus</i>, <i>Neisseria</i>, <i>Paracoccus</i>, <i>Pseudomonas</i>, and <i>Thiobacillus</i> (11). Some of these species, for example <i>Pseudomonas</i>, are capable of using the cyanide ion and thiocyanate as the sole source of carbon and nitrogen and therefore, are particularly effective at cyanide degradation.</p> <p>Inhibition of microbiological activity 25mg.l⁻¹ HCN without obvious impact (12)</p>	
5.3	Conclusion	<p>Cyanide ion is toxic to microorganisms at concentrations as low as 5–10 mg/L, acclimation increases tolerance to this compound. A number of pure cultures of microorganisms degrade low concentrations of cyanide under both aerobic and anaerobic conditions.</p> <p>A number of microorganisms have been identified that are capable of uptake, conversion, sorption, and/or precipitation of the cyanide ion, cyanate, and thiocyanate, including species of the genera, <i>Actinomyces</i>, <i>Alcaligenes</i>, <i>Arthrobacter</i>, <i>Bacillus</i>, <i>Micrococcus</i>, <i>Neisseria</i>, <i>Paracoccus</i>, <i>Pseudomonas</i>, and <i>Thiobacillus</i>.</p> <p>Inhibition of microbiological activity 25mg. l⁻¹ HCN without obvious impact (12)</p>

Detailed justification:	<p>The biocidal product URAGAN D2 is the same as the technical grade active substance. There are no data available to indicate that simple metal cyanides and hydrogen cyanide bio concentrate in aquatic organisms (5,6,7,8).</p> <p>Due to its physical properties ($K_{ow} < 5$) hydrogen cyanide is not expected to bio concentrate.</p> <p>Bioconcentration factor (BCFs) of 0.735 can be calculated for hydrogen</p>	

Lučební závody Draslovka, a. s. Kolín	May 2013	HCN	Doc III-A A7.4.2 Bioconcentration	Page 2 of 2
---	----------	-----	--------------------------------------	-------------

	<p>cyanide, using the equation of Technical Guidance Document on Risk Assessment, part II, (p. 126) (1).</p> $\log BCF = 0.85 \cdot \log Kow - 0.70$ <p>(Log Kow = 0.66)</p> $\text{Log BCF} = 0.85 \cdot 0.66 - 0.70 = -0.139$ $BCF = 0.735$ <p>There is no evidence of bio magnification of cyanides in the food chain (9). Accumulation of cyanide in food webs is not expected, considering the rapid detoxification of cyanide by most species and the lethal effects of large doses of cyanide (9). There is no indication of bio magnification of cyanides in aquatic and terrestrial food chains (9). Because of the high toxicity of cyanides at high doses and rapid metabolism at low doses, bio magnification of cyanide in animals seems unlikely.</p> <p>Cyanide is not accumulated or stored in any mammalian species that have been studied.</p> <p>An estimated BCF of 3 was calculated for hydrogen cyanide, using a log Kow of -0.25(10) and a regression-derived equation (11). According to a classification scheme (12), this BCF suggests the potential for bio concentration in aquatic organisms is low.</p>

Section A8 Annex Point IIA VIII	MEASURES NECESSARY TO PROTECT MAN, ANIMALS AND THE ENVIRONMENT
--	---

Section A8.1 Annex Point IIA VIII.8.1	Recommended methods and precautions concerning handling, use, storage, transport or fire	
<i>Recommended methods and precautions concerning handling, use</i>	Evacuate affected area. Use personal protective equipment. Prevent contact with the substance. In any case prevent inhaling. Provide fresh air supply into and sufficient ventilation of closed spaces. Prevent contamination of the environment; prevent the substance from entering surface waters and sewerage.	
<i>Use</i>	The product may be handled only by trained personnel! Use personal protective equipment.	
	Respiratory protection	Self-contained breathing apparatus or face mask equipped with B2 filter or equivalent (e.g. combined filter A2B2E2K2P3D).
	Eye protection	Self-contained breathing apparatus or face mask equipped with B2 filter or equivalent (e.g. combined filter A2B2E2K2P3D).
	Hand protection:	Use standard chemical resistant (nitrile) rubber gloves or full chemical suite.
	Skin protection:	Gastight chemical protective clothing and rubber boots
<i>Storage</i>	Due to the danger or accidental release of HCN, only personnel authorised to handle HCN may enter the storeroom, and only with a gasmask ready to use. Structure of the storeroom must comply with ČSN 73 0804 standard (fire safety) with annexes and changes permitted by ČSN 65 0201 or equivalent national fire safety standard.	
<i>Fire</i>	Fire fighting measures Fragmented water stream, powder A-B-C-D Firefighters must be equipped with protective chemical suite and self-contained breathing apparatus	

<i>Transport</i>

Note:			HYDROGEN CYANIDE, STABILIZED Marine pollutant: yes EmS No.:	Hydrogen cyanide, stabilized PAO: not permitted CAO: not permitted
Additional information: <i>Limited quantity transport:</i> NOT PERMITTED. <i>Below-the-limit quantity transport:</i> NOT PERMITTED				

Section A8.2 Annex Point IIA VIII.8.2	In case of fire, nature of reaction products, combustion gases, etc.	
	Liquid evaporates very quickly. Vapours form explosive mixtures with air. Liquid hydrogen cyanide tends to polymerise. This reaction is catalysed by alkali substances and generates ammonia, which further promotes polymerisation – with possible occurrence of explosions. When diluted with water, explosive and highly toxic mixtures of vapours and air form above the water surface. Combustion gases: carbon monoxide, carbon dioxide, nitrogen oxides.	

Section A8.3 Annex Point IIA VIII.8.3	Emergency measures in case of an accident	
	Evacuate affected area. Use personal protective equipment Prevent contact with the substance. In any case prevent inhaling. Provide fresh air supply into and sufficient ventilation of closed spaces. Observe common occupational and hygienic regulations. If contamination occurs, inform competent authorities. If possible, pump spilled hydrogen cyanide back to a secure and gas-tight vessel. Protect from sparks and flames. Dilute HCN puddles with water and treat with caustic soda and green vitriol. If the spill enters sewerage, add approx. 10kg green vitriol and 2kg 100% NaOH to each kg of spilled HCN in the place of release. If soil contamination occurs, the soil must be detoxified and removed. When carrying out the above mentioned, use personal protective equipment (see 8.1) Ventilate the contaminated area.	

Section A8.4 Annex Point IIA VIII.8.4	Possibility of destruction or decontamination following release in or on the following: (a) air, (b) water, including drinking water, (c) soil	
	<p>Air: When the escape into the atmosphere of hydrocyanic acid will be diluted in the atmosphere Persistence half-life of hydrogen cyanide in the atmosphere is 1-3 years. The most important mechanism of its degradation in air is a reaction with hydroxyl radicals released by air moisture.</p> <p>Water: When using the method of application properly, it cannot escape into the aquatic environment.</p> <p>Soil: When using the method of application properly, it cannot escape into the soil. The ability of hydrogen cyanide to get bound to dry soil is also low.</p>	
Section A8.5 Annex Point IIA VIII.8.5	Procedures for waste management of the active substance for industry or professional users	
	<p>After the treatment has finished, empty cans and reels (free of hydrogen cyanide) shall be collected and disposed of. According to the Waste Catalogue the substance is a hazardous waste. Hand over marked packaging, incl. waste identification sheet, for disposal to a specialised company authorised to carry out such operations.</p>	
Section A8.5.1 Annex Point IIA VIII.8.5.1	Possibility of re-use or recycling	
	No, hydrogen cyanide is a gas	
Section A8.5.2 Annex Point IIA VIII.8.5.2	Possibility of neutralisation of effects	
First aid measures		
General measures:	<p>Upon administering first-aid it is necessary to obtain medical help immediately! Inform medical staff about first-aid administered. Ensure protection of the person administering first-aid.</p>	
Inhalation:	<p>Move the affected person to fresh air, remove contaminated clothing and wash, if necessary; protect from cold. At the same time, administer Nitramyl by inhalation (if available), even if the person is unconscious but breathing sufficiently: Break the vial with Nitramyl (best in a handkerchief), and place near the mouth and nose of the victim to ensure deep inhaling, alternatively administer medicinal oxygen. If the patient is not breathing, start with artificial respiration using a resuscitation apparatus (pulmotor, Saturn oxi etc.). Do not apply mouth to mouth artificial breathing – danger of poisoning for the rescuer!</p>	
Skin contact:	<p>Wash contaminated skin with large quantities of (preferably lukewarm) water with soap. Immediately remove contaminated clothing; if poisoning symptoms appear, follow the above instructions for inhalation exposure. Obtain medical help immediately.</p>	

Eye contact:	Rinse with large quantities of water for 10-15 minutes. While rinsing, keep eyelids open even by using force. Always obtain immediate medical help! Inform medical staff about first-aid administered, and the fact that the affected person has handled hydrogen cyanide.	
Ingestion:	Since hydrogen cyanide is soaked in a sorbent material, ingestion is not expected. However, poisoning from clothing soaked with HCN vapours is possible.	
Other data:	If unconscious, or collapsed and vomiting, place the affected person to a recovery position on a side (to prevent vomitus aspiration). Upon administering first-aid it is necessary to obtain medical help immediately!	

Professional user

Each group must be equipped with a first-aid box, should any poisoning occur. Apart from standard equipment, the first-aid box must also contain:

Amylium nitrosum (inhal. ampoules, 150mg) (e.g., Nitramyl, Inhalationsampullen, Berco; Amylnitrit – Brechampullen, Thilo)	20 ampoules
OR	
medicinal oxygen	1 bottle per person in contact with HCN
CYANOKIT for i.v. treatment by trained doctors	1 packaging

The first-aid box shall be made ready to use prior to the gas filling commencement.

Section A8.5.3 Annex Point IIA VIII.8.5.3	Conditions for controlled discharge including leachate qualities on disposal	
	Hydrogen cyanide is a gas, no landfill is done	
Section A8.5.4 Annex Point IIA VII.8.5.4	Conditions for controlled incineration	
	Hydrogen cyanide is a gas and cannot be incinerated.	

Section A8.6 Annex Point IIA VIII.8.6	Observations on undesirable or unintended side-effected, e.g. on beneficial and other non-target organisms	
	Due to the use pattern (i.e. fumigation in enclosed spaces) and physical properties of hydrogen cyanide, other beneficial or non-target organisms will not be exposed. Consequently, these studies are not applicable and no other data are available. There will be no exposure to wildlife. The fumigation will not leave a residue to which non-target organisms / species could be exposed to.	

Section A8.7 Annex Point IIIA VIII.1	Identification of any substances falling within the scope of List I or List II of the Annex to Directive 80/68/EEC on the protection of ground water against pollution caused by certain dangerous substance	
	Hydrogen cyanide is a gas, it does not come into contact with ground water.

Section A9 Annex Point IIA IX.	CLASSIFICATION AND LABELLING
---	-------------------------------------

Current classification	Harmonised classification and labelling according to Annex VI to Regulation (EC) No. 1272/2008
Hazard classification and Category Code(s)	Flam. Liq. 1; Acute Tox.1; Aquatic Acute 1; Aquatic Chronic 1
Hazard statement Code(s)	H224; H330; H400; H410
	Self-classification and labelling according to Annex VI to Regulation (EC) No. 1272/2008
Hazard classification and Category Code(s)	Flam. Liq. 1; Acute Tox.1; STOT SE 1 Aquatic Acute 1; Aquatic Chronic 1
Hazard statement Code(s)	H224; H300; H310; H330; H370 H400; H410

Labelling	
Pictogram and	
Signal word	Danger
Hazard statements	H224 Extremely flammable liquid and vapour H300 Fatal if swallowed H310 Fatal in contact with skin H330 Fatal if inhaled H370 Causes damage to organs (brain, heart, testes) exposure: oral, dermal, inhalation H410 Very toxic to aquatic life with long lasting effects
Precautionary statement(s)	P210 Keep away from heat/sparks/open flames/hot surfaces. — No smoking. P260 Do not breathe dust/fume/gas/mist/vapours/spray. P262 Do not get in eyes, on skin, or on clothing. P281 Use personal protective equipment as required. P303+P361+P353 IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower. P304+P340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. P310 Immediately call a POISON CENTER or doctor/physician.
Supplementary label information	Designation of uses: Wood preservatives, Rodenticides, Insecticides, acaricides and products to control other arthropods Only for professional, trained and licensed users (fumigators). Read enclosed instructions before use.
